

Hackathon Credits: Lovable & Gonka Compute

Part 1 — Lovable Pro Plan (Free Access)

Lovable is our headline sponsor for this event — please use Lovable as your primary tool, and combine the other AI tools/compute below (Gonka brokers) alongside Lovable rather than instead of it.

Lovable has created a discount code giving all participants free access to the **Pro Plan 1** during the event.

How it works: - The code gives access to Pro Plan 1 (100 credits) at no cost. - Unlocks all Pro Plan 1 features for the duration of the plan. - The code must be redeemed **by the end of the event**, and should **not be shared with anyone outside of the event**.

How to apply the code: 1. Go to lovable.dev 2. If you don't have an account, click "Get started" → create an account. 3. If you already have an account, go to Settings → Plans & Credits. 4. Select **Pro Plan 1 (100 credits)**. Make sure to choose the **monthly** plan. 5. At checkout, enter the discount code: **COMM-GOTH-T6VY**

If any attendees already have a paid account, they'll just need to create a new workspace to redeem the code.

Note: You may be asked to enter payment details, but you will have one month to cancel, and you can cancel the account as soon as it is activated.

Good luck and have fun!

Part 2 — Gonka Compute Access

Use these alongside Lovable — for example, to power custom AI features or backend logic in the products you build with Lovable, or for other coding/agent work outside Lovable.

Gonka is decentralized AI infrastructure. Several independent "brokers" (API providers) offer access to compute on the network. You can use multiple providers at once, but credits/tokens **cannot** be moved between them.

The network currently supports three models: - **MiniMaxAI/MiniMax-M2.7** - the weakest model, but the network has good capacity for it. Good for simple, high-volume tasks. - **deepseek-ai/DeepSeek-V4-Flash-0731** - a strong model, good for coding/agents. - **zai-org/GLM-5.3-Flash** - a strong model, good for coding/agents.

Common error: Error 429 means the network is temporarily out of capacity. Wait a few seconds/minutes and retry, or try a different model.

Support: For provider-specific issues, contact that provider directly. For questions about Gonka itself, reach Sultan at sultan@libermans.co or @sultee on Telegram.

Note on Dahl, Proxy, and JoinGonka: these providers only offer a limited number of keys/codes, so each is assigned **one per team** at the organizer help desk (not listed here) to make sure no team accidentally — or intentionally — claims more than their share.

🔑 Dahl

- Site: <https://inference.dahl.global/>
- You get: **a unique API key** (100 million tokens), no registration required
- **How to get your key:** request one **per team** at the organizer help desk during the event. One key will be assigned to your team and crossed off the master list.

🔑 Proxy by Gonka.gg

- Site: <https://proxy.gonka.gg/>
- Register an account at <https://proxy.gonka.gg/register>
- You get: **a unique promo code** (150 million tokens) to use during registration
- **How to get your code:** request one **per team** at the organizer help desk during the event.

🔑 Gonka-api

- Site: <https://gonka-api.org/>
- Register, then enter the code on the dashboard
- **Code (shared with everyone, valid for the first 200 registrations):** HACKATHON26 → 150 million tokens

🔑 JoinGonka

- Site: <https://gate.joingonka.ai/>
- Register and enter the code in the “Referral code” field
- You get: **a unique promo code** (~50 million tokens)
- **How to get your code:** request one **per team** at the organizer help desk during the event.

🔑 Hyperfusion

- Site: <https://console.hyperfusion.io/>
- Register, then enter the code on <https://console.hyperfusion.io/profile>
- **Code (shared with everyone, valid for up to 300 users):** GOTHENBURGTECH → \$50 in credits
- Note: wider range of models available, but pricing may be higher than other brokers

Bonus — for those who need more

Gonka24 — <https://gonka24.com/> — \$10 free upon registration, no code needed

Gonkarouter — <https://gonkarouter.io/> — \$20 free upon registration, no code needed. Docs: <https://gonkarouter.io/docs>

Connecting your tools

To connect a coding tool/agent to a broker, you need three things: 1. **Base URL** (unique to each broker) 2. **Model ID** (e.g. zai-org/GLM-5.3-Flash) 3. **API key** (unique to each broker/account)

Most provider websites have setup instructions for this.
